## **Psychotherapy survey**

### **Methodological issues**

---

Problem : Data was collected by people we don't work anymore with.

- How did they do it ? ( -> Lime survey, we can check the survey)
- Why they did it ? no idea about the hypothesis
- What was the context, rationale and bibliography around it ? (no idea)

### **Contact people acknowledge them, methods, context of it**

---

- Alina (UK, Romania)
- Michals (Sweden)
- Rita (Portugal)

### **Analysis**

---

- improve graphs (Roberts and Thomas)
- Factorial analysis (Diego, Roberts, Thomas)

### **Review of the analysis**

---

- Prepare questions to improve the process of the analysis (all) 1st draft [here](#)
- discuss about what we can do with this data with seniors (Ekin)
- discuss about what we can do with this data with psychotherapy or education in psychiatry journals (Nikitas idea) : make a list of journals
- Which kind of article ? letter to the editor ? / Pre-registration with the questions we can raise from this "pilot" study

## **What to do with the countries we don't have answers from ?**

---

- Complete the study, how much time it will take ?
- Would it be better to change all the questions if the survey to do a better one ? We won't really be able to compare the countries each other since the samples are too small.

## **Redo a survey ?**

---

Improve the questions especially about subjective part of it, what do they think about the training in each kind of psychotherapy they have at the moment

## **Promotion of this work**

---

- Presentation during EABCT (Thomas). Abstract deadline 28th April prepared by Ekin, Roberts and Thomas. Need to define who will be co-authors of the poster (Ekin, Roberts, Thomas...)
- Preparation for FIAP (Italy) : Diego, it would be useful to translate the abstract
